

Ripping DVDS; De-Muxing:

On Each G5 → Applications Folder → “MactheRipper.app”

This program will Rip the entire DVD as a full extraction, De-Macrovision the DVD, allow for the Rip and De-Macrovision of chapters, and/or allow for the De-Muxing of the DVD files. (De-Muxing is returning the .VOB files to their source files which were likely video- .m2v (mpeg2) and/or audio - .ac3.

The simple decryption of DVDS and subsequent authoring of a DVD without Macrovision protection:

- 1) Open Applications Folder → “MactheRipper.app”
- 2) Load your DVD in the tray
- 3) Quit DVD Player which auto-magically launches upon DVD insert.
- 4) in Mac the Ripper, File→Save To: select an appropriate location. Once you burn your new DVD PLEASE REMEMBER to DELETE the DVD data information (it swallows 4-7 Gigabytes)
- 5) Click on “GO!”
- 6) Open Applications → Toast
- 7) click on the video tab and select “DVD-Video from Video_TS folder”
- 8) Then click “select” button in main window and locate the DVD folder you ripped using MactheRipper. Toast will compress as necessary to fit the movie on a DVD.
- 9) You now have a DVD from which you may pull any information you desire.

OPTIONS:

De-Muxing , selection of chapters for rip, RCE selection and Region coding please refer to the manual:

A strong complement to “MactheRipper.app” is the Applications → “ffmpegX”
This program can convert many file formats to others and can provide a key to unlocking the de-muxed files.
